

About the Company: 360Facility is a leading provider of “Software as a Service” (SaaS) Facility Management and IT Help Desk software. 360Facility is committed to excellence, respect, integrity, and open communication. We are seeking team members who possess similar values and want to be part of a fast growing company.

Objective: The Software Engineer will assist in the design and construction of web applications to run in our Application Service Provider (ASP) environment. Primary functions are to design and code various modules for new features; maintain existing software and application infrastructure, and work with the Product Development Team on requirements. Secondary functions include quality assurance as needed, working with new technologies for future deployment and assisting with product documentation. The role will report directly to the Director of Product Management.

Responsibilities

- Understanding of the full development life-cycle process (requirements gathering through implementation)
- Researches problems discovered by BA or product support and develop solutions to the problems
- Assists QA in developing test plans and tests that will effectively verify correct software operation
- Work with the Product Management team & Customer Service team to build world class web software to design specifications
- Implement test-driven development programming methodologies within the team.
- Work autonomously to design, code, test, document, and debug programs and sub-routines of moderate complexity within required timelines
- Contribute as a team member in the development of new products as well as enhancements
- Provide overall technical guidance on 360Facility best practices and implementation of design patterns
- Keep abreast of new technologies in the web development field.
- Other assigned responsibilities as required

Requirements

- Computer Science degree or equivalent experience
- Minimum 3-5 years web development experience utilizing Microsoft Development Tools
- Microsoft .NET experience required (specifically ASP.NET)
- Working knowledge of C#,VB.Net and TSQL
- Advanced knowledge of Windows 2003 Server environments
- Proficient in Microsoft Visual Basic and Microsoft Visual Studio
- Proficient in HTML, Active Server Pages, and JavaScript
- Proficient in Microsoft SQL Server 2005/2008 (expertise with Stored Procedures and User-Defined Functions), database structures, and ADO
- Knowledge of web server infrastructure (IIS)
- High independence, self-motivated, and can work under a lead developer
- Ability to handle multiple projects
- Candidate should be able to provide examples of prior work

Desired but not required:

- Familiarity of classic ASP with VBS
- XML experience is desired.
- Database performance tuning experience is desired.

If you meet the requirements and feel you are qualified contact mbechtel@360facility.com.
